

# Plumeless Thistle

Rosette Stage

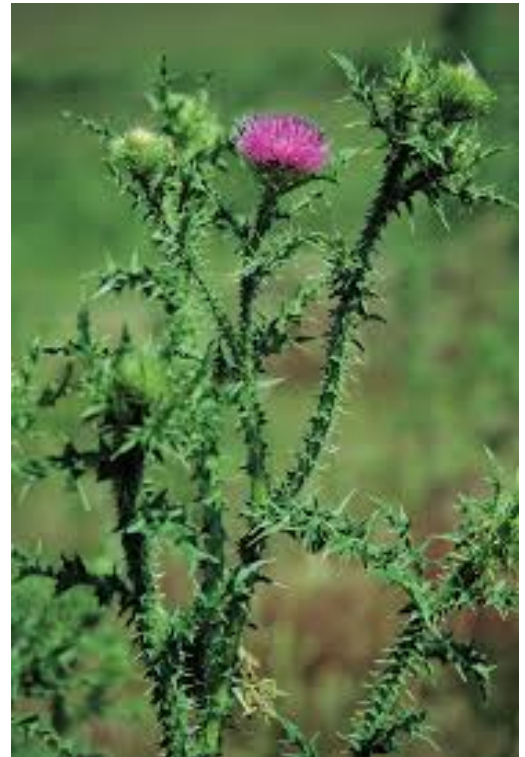

An aggressive weed growing in pastures and noncropped areas, this weed stands usually 3-4 feet in the air with sharp and spiny stems all the way up to the head. A big scary looking plant!

**Management:** **2,4-D ester (4L)** –late fall treatment of rosettes or in spring before flowering stage

**Tordon 22K** – Good for application from Oct.1-Dec.1

**Grazon P+D** – rosette to early bolt growth stage application

**Life Span:** Biennial

Flowering Stage

Whole Plumeless thistle
